

Header length is too large to handle
(i) total size is larger
(ii) single header is too long to handle.

due to server overload server may refuse to handle req.

414

Can server interpret given uri?

Yes

Reason:- uri is too long to handle. may be due to
(i) loop redirection
(ii) Server Client trying to attack server to exploit security holes

Can server handle given headers

No

431

Server encountered

500

General Expectation is,
Expect: 100-continue
& means client willing to send msg body.
if server do not want to receive send 417.

501

No

Is required method or functionality available

method is not implemented. ex
by server, server must support GET & HEAD method

Intentionally not supporting

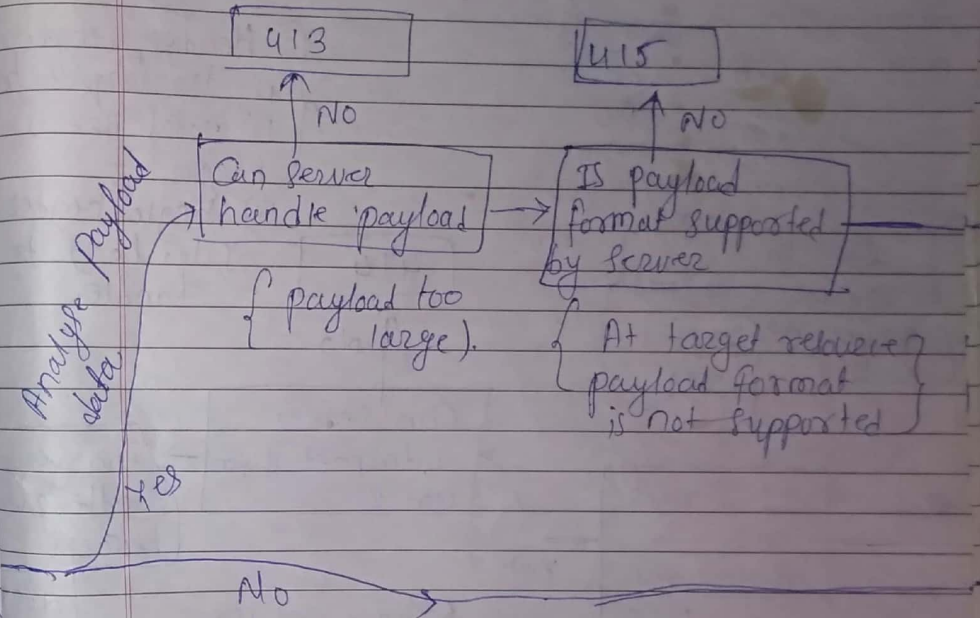

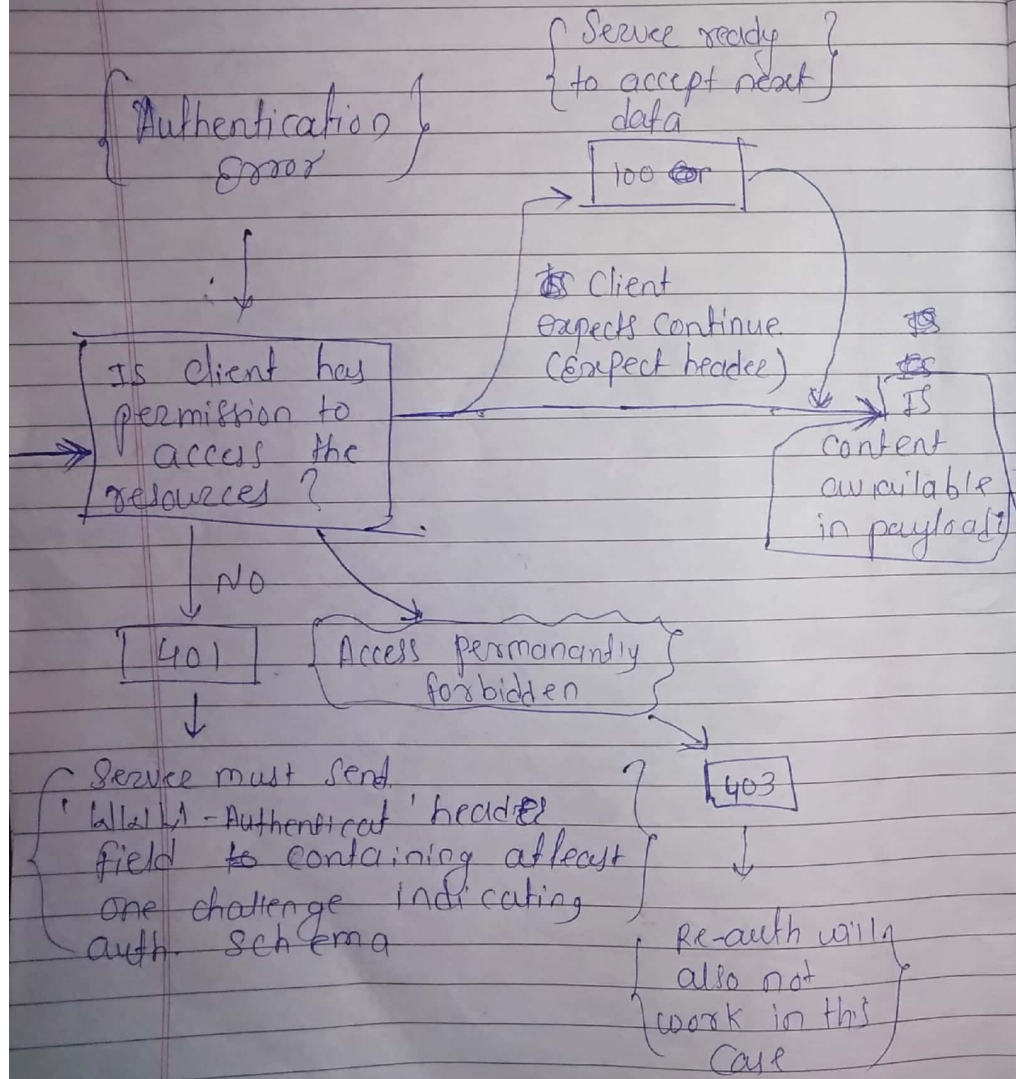

405

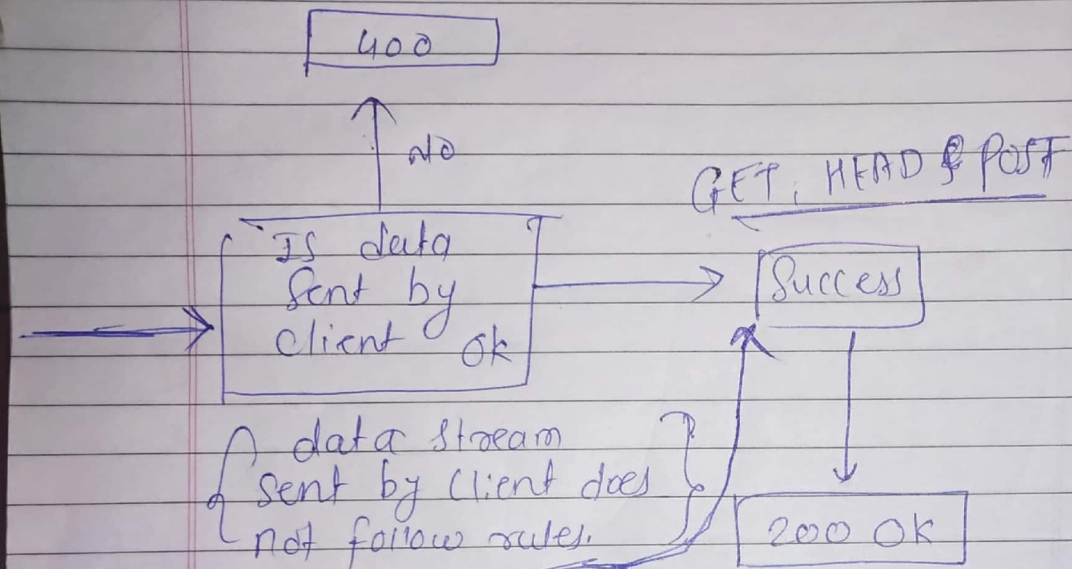

Can server meet expectation given by expect header?

No

417

Unexpected Error

Req. succeeded.

Response Cacheable
by default.

GET:- Resource fetched & is
transmitted in msg body

HEAD:- required headers
included in resp. without
msg body.

Post:- Result of action is
transmitted in msg body
